

Post-processed data for “Increasing precipitation variability on daily-to-multiyear timescales in a warmer world”

Wenxia Zhang (zhangwx@lasg.iap.ac.cn)

State Key Laboratory of Numerical Modeling for Atmospheric Sciences and Geophysical Fluid Dynamics, Institute of Atmospheric Physics, Chinese Academy of Sciences, Beijing, China.

Here we provide the post-processed data for the moisture budget analysis. For each timescale (namely, synoptic, monthly, intraseasonal and interannual), we provide the standard deviation of the filtered time series for different variables.

Simulations: HadGEM3-GC3.05 Perturbed Parameter Ensemble with 14 model variants developed by the Met Office Hadley Centre (Sexton et al., 2021; Yamazaki et al., 2021).

Spatial scale: global grid boxes

Format: STDDEV_{varname}_{timescale}_{period}_multirun_{years}.nc

- “timescale”: synoptic, monthly, intraseasonal and interannual
- “period” and “years”: hist_1900-1959 and rcp85_2040-2099
- “varname”:
 - pr (precipitation)
 - evspsbl (evaporation)
 - hori_adv (horizontal moisture advection; Eq. (3) in MATERIALS AND METHODS)
 - vert_adv (vertical moisture advection; Eq. (3) in MATERIALS AND METHODS)
 - residual (residual; Eq. (3) in MATERIALS AND METHODS)
 - vert_adv_term_2layer (vertical moisture advection approximated by the two-layer model; Eq. (5) in MATERIALS AND METHODS)
 - vert_adv_term_lower (lower level component of vert_adv_term_2layer)

- `vert_adv_term_upper` (upper level component of `vert_adv_term_2layer`)
- `TH_q1fw0f` (thermodynamic term of vertical moisture advection; Eq. (8) in MATERIALS AND METHODS)
- `DY_w1fq0f` (dynamic term of vertical moisture advection; Eq. (9) in MATERIALS AND METHODS)
- `wfqb` (simplified dynamic term; Eq. (14) in MATERIALS AND METHODS)
